

ACCUWEIGH LPAX-30

Drop-Centre Low Profile Axle Weigher

Specifically designed for weighing axle groups, Diverseco's Accuweigh low profile axle weighers (LPAX) are modular, lightweight, easily transportable and fully portable weighing devices with a 30 tonne capacity.

Installed as a stand-alone unit up to 65mm above ground, or in a 65mm shallow recess, weighing occurs on two 3.6m long tracks that enable the weight of each axle group to be captured efficiently. Because they sit almost flush with the ground, LPAX weighers provide accurate readings.

LPAX weighers are designed to be used on a flat concrete hardstand or on an area when the land has been suitably compacted.

The LPAX weighs about 1.25 tonnes per wheel track and can be moved with just a fork lift. For this reason, their portability is one of their major drawcards.

FEATURES

- { Solid Full-Load Cell Design
- { Total Capacity Up to 30 tonne
- { Battery Operated Indicator
- { Steel Ramps
- { Twin Platforms
- { Each Platform is 900mm x 3,600mm
- { Weighing Surface 65mm High
- { No Installation Required
- { Factory Calibrated
